

UJJWAL KAUSHIK

Pre-final Year CSE Undergraduate · SWE Intern @ FPT Software, Vietnam · Full-Stack & AI
New Delhi, India · +91-8882472515 · ujjwalkaushik672@gmail.com · [LinkedIn](#) · [GitHub](#)

PROFESSIONAL SUMMARY

Full-stack & applied-AI engineer who turns open-ended problems into shipped products — from a hospital facial-recognition system to a multilingual chatbot SaaS. Two onsite SWE internships in Vietnam, currently building enterprise RAG/LLM systems at FPT Software.

EDUCATION

B.Tech — Computer Science & Engineering · JSS University, Noida Aug 2024 – Jul 2028
SGPA: 8.67 → 8.92 (Semesters 1–3) · Coursework: DSA, OOP (C++), DBMS, OS, AI, Software Engineering, Cyber Security, COA

WORK EXPERIENCE

Software Engineering Intern · FPT Software Jun 2026 – Present
Ho Chi Minh City, Vietnam (Onsite) · FPT Software — Vietnam's largest & one of South-East Asia's biggest IT companies
• Building an enterprise-grade full-stack AI application featuring RAG pipelines, LLM integration, and a Knowledge Graph — sole developer across backend (Python), React.js frontend, and MongoDB data layer.
• Engineered the RAG pipeline end-to-end — document chunking, vector-store embedding, and grounding LLM responses against a constructed knowledge graph to improve answer accuracy and source traceability.
• Architecting DevOps infrastructure with Podman containers and MinIO object storage for scalable, reproducible deployment; operating independently within a professional enterprise environment under NDA across the full SDLC.

Software Engineering Intern · DXP Software Jun 2025 – Jul 2025
Ho Chi Minh City, Vietnam (Onsite)
• Worked within a 3-person team across 3 simultaneous live client projects; delivered PowerApps and SharePoint automation solutions digitising enterprise client workflows.
• Independently owned and shipped a standalone production system end-to-end (PatientID+, detailed below); formally recognised by mentors for outstanding quality of independent engineering work.

PROJECTS

AuraDesign.AI · Backend & AI Lead · Team of 3 · HackData 2026, Shiv Nadar University 2026
• Conceived and built an AI UI/UX analyser — scrapes any site via Playwright, tracks real user eye-gaze with WebGazer.js to generate attention heatmaps, benchmarks against industry standards via Gemini API, and outputs an impact-ranked fix list where each fix opens a context-aware, ready-to-code Gemini chat session.
• Owned system architecture, all API integrations, and Vercel deployment — concept to live demo within hackathon constraints. Placed Top 10 / 255 teams. · *React.js · Node.js · Playwright · WebGazer.js · Gemini API · Python · Vercel*

Conor AI · Solo · VibeCon 2026, IIT Delhi 2026
• Built a SaaS platform converting any website into a deployable multilingual AI chatbot — paste a URL, get an embeddable React component or JS snippet live with zero coding. Dual modes (Acquisition & Customer Service), lead-tracking CRM, and an insights dashboard — built solo across every layer in 40 hours.
• Engineered at VibeCon 2026, IIT Delhi alongside founders including Vijay Shekhar Sharma (Paytm); chatbot responds in any language via Emergent's Universal LLM API. · *React.js · Node.js · Express.js · MongoDB · Emergent Universal API (LLM) · Vercel*

PatientID+ · Solo · DXP Software, Vietnam Jul 2025
• Independently architected a full-stack hospital patient system with real-time OpenCV facial recognition — sole developer from MongoDB schema to React.js frontend with live camera feed, fully replacing manual paper-based patient ID lookup.
• The only intern-level project to ship as a standalone production system during the internship; received formal recognition from DXP Software mentors for quality and completeness. · *React.js · Node.js · Express.js · MongoDB · Python · OpenCV · REST API · Vercel*

E.D.I.T.H. · Solo · IT Solutions Project · Semester 3 2025
• Built a solo AI student-assistant web app — upload any document and query it conversationally through a Gemini-powered chat, with Tesseract OCR extracting text from scanned files and images for accurate document Q&A.
• Shipped an integrated productivity suite (to-do lists, Pomodoro timer, productivity tracking) plus a password-protected document vault for secure storage — full-stack across a React frontend and FastAPI/Python backend. · *React.js · FastAPI · Python · Gemini API · Tesseract OCR*

TECHNICAL SKILLS

Languages: Python, JavaScript (ES6+), TypeScript, C++, C, SQL, HTML5, CSS3
Frontend: React.js, Tailwind CSS, Bootstrap, Figma (UI/UX Prototyping)
Backend: Node.js, Express.js, FastAPI, Flask, REST API Design, MongoDB, MySQL
AI / CV: OpenCV, YOLOv8, Gemini API, LLM Integration, RAG Pipelines, Tesseract OCR, ML Fundamentals
DevOps: Git, GitHub, Podman, MinIO, Vercel, Render, Postman, Linux/Bash, Playwright
Concepts: DSA, OOP, SDLC, Agile, Software Engineering & Testing, Cyber Security, Blockchain

LEADERSHIP & VOLUNTEERING

Technical Lead · Entrepreneurship Development Cell (EDC) — JSS University Dec 2024 – Present
Promoted from Technical Core Member (Jun 2026)
• Lead a team of 8 engineers — assign daily tasks, review submissions, clear blockers, and run structured growth sprints; coordinate with non-technical departments to scope and deliver solutions.
• Own all technical infrastructure for EDC: manage the main website and built/deployed an auction (live-bidding) portal and a participant registration system, both used in production at institutional events.

Student Coordinator · Competitive Programming Cell — CSE Tech Council Sep 2025 – Present
• Leads CP initiatives for 100+ students as part of a 5-member team (scaling to 12) — organised Code Genesis and a 3-week DSA Bootcamp with 172 registrations and a timed HackerRank contest; mentors peers in DSA and problem-solving.

RESEARCH & RECOGNITION

• National Conference Presenter — SPACE MISSION 2025, Dr. APJ Abdul Kalam International Foundation · Solo research on decentralised P2P energy trading via Ethereum smart contracts and IoT microgrid monitoring, presented to a national academic audience.
• SIH 2025 Internal Qualifier — Smart Flow: YOLOv8 traffic-management system with ML-based signal optimisation; selected to represent JSS University in the Smart India Hackathon.
